

AFFORDABLE GRANITE BENCHTOPS

Granite Maintenance

Granite is a hard wearing and long lasting work surface however the following should be noted.

Affordable Granite Benchtops have been sealed with an appropriate granite sealer to assist in the protection against staining. To maintain and keep them in their original condition we recommend the following:

Cleaning

We recommend the use of Briotop Easy-Care cleaner. Briotop Easy-Care Cleaner is specifically designed for continuous care of granite surfaces. This product can be purchased from Affordable Granite Benchtops.

Alternatively you may use warm soapy water (mild detergent) to clean your granite.

Do **NOT** use harsh or abrasive cleaning products.

Do **NOT** use highly acidic cleaning products such as citrus based.

Attend to spills promptly – particularly highly coloured liquids such as red wine or beetroot juice.

Avoid allowing spills to dry on the benchtop as some can penetrate into the stone – even though it has been sealed.

Oils, citrus juices and acidic fluids can blemish the polished surface if not wiped up reasonably promptly.

Use

Although granite can withstand high temperatures without damage, we recommend using a trivet or board to place your hot baking trays, frying pans, or other cooking utensils which may have a coating of oily or acidic liquids.

We recommend the use of a cutting board.

Maintenance

To protect and maintain your granite benchtop we also recommend the occasional use of Briotop spray and wipe. This product makes the surface water-repellant and produces an excellent gloss. This product can be purchased from Affordable Granite Benchtops.

We advise that your granite should be resealed approximately every 12 months (depending on usage) to protect against staining. Contact Affordable Granite Benchtops to arrange this.
